

1                   ABSTRACT

2                 A composition and a dosage form are disclosed comprising oxybutynin  
3         alone/or accompanied by another drug indicated for therapy. A method is  
4         disclosed for administering oxybutynin alone/or accompanied by a different  
5         drug or for administering oxybutynin and a different drug according to a  
6         therapeutic program for the management of incontinence alone, and for other  
7         therapy.
